

# PSI:CAPTURE

Is there one product to meet all my scanning and capture needs?

## ONE ANSWER: **PSI:CAPTURE**

Organizations today have so many requirements for scanning and capture, they often deploy a number of solutions to meet all their departmental needs. This increases the processing time, administrative headache, support requirements, and overall cost of maintaining their Document Management infrastructure. PSIGEN products provide the ability to consolidate and standardize to a single platform enterprise wide, providing the utmost in flexibility, and supporting numerous back end systems.

PSIGEN's PSI:Capture enhances the capabilities of any scanning device. Its simple configuration and easy to use interface allows for quick deployment and adaptation by end users, resulting in an accelerated return on investment.

Capture documents from direct connect scanners, import from network folders, Share-Point libraries or Right-Fax Fax Servers.

PSI:Capture's architecture provides for interactive or automated processing.

Centralized management, configuration and storage provide for flexible and easily globally deployed workflows.

Documents can be migrated into any one of 53 ECM or DM systems.

# PSI:CAPTURE MODULES

## CAPTURE

Our capture module is the first step in any capture workflow, and provides integration with direct connect scanners, multi-function printers (MFPs) and network based image folders. The module can be used to interactively scan or import, but can also be automated, allowing auto-import from hot folders, SharePoint Document Libraries(WebDAV folders) RightFax Servers or FTP/SFTP servers.

## OPTICAL CHARACTER RECOGNITION (OCR)

The Optical Character Recognition (OCR) Module allows the conversion of scanned images into meaningful text. The module can be used to extract document metadata as well as create searchable PDF documents or text. It can also be used in conjunction with other modules to provide classification and data extraction.

## INTELLIGENT CHARACTER RECOGNITION (ICR)

Intelligent Character Recognition (ICR) Module provides the ability to extract metadata from documents with hand-printed information, and translates the information into data fields. It also provides the ability to “rubberband” hand printed text during the indexing process and auto-populate fields.

## ADVANCED DATA EXTRACTION (ADE)

The Advanced Data Extraction (ADE) Module is an advanced data extraction and parsing engine that can intelligently apply scripting or pattern matching logic to metadata which provides greater accuracy to OCR, ICR, manual data entry and auto-populated fields. The module virtually eliminates the need for hand-keying information, increases accuracy and reduces the time required for the metadata capture process.

## CLASSIFICATION AND FORMS PROCESSING

PSI:Capture’s document classification feature set allows intelligent classification of forms and documents through the use of the OCR and ADE modules. Through our forms processing engine, you can auto-extract complex data structures and information from disparate documents. (Full Module in Q1-2012)

## MIGRATION

The final step in any capture workflow is the migration of documents and/or data to a repository. PSIGEN has built integrations with over 50 different Enterprise Content Management (ECM) and Document Management Systems (DMS), allowing you the utmost in flexibility in your capture process. This allows the user to place the same batch of work in multiple ECM systems without reprocessing.
